Corporate Profile

Hydraulic, pneumatic and electrical control systems and services
SMS are specialists in the design and manufacture of electrical, hydraulic and pneumatic controls systems to the Oil and Gas industry.

Providing systems for the Subsea, Intervention and Onshore markets, SMS work with the industry’s largest EPCs and Operators to safely deliver projects with strong project management and a focus on product quality and on-time delivery.

SMS work hard with our customers to drive down costs and increase efficiencies wherever possible through smarter working practice and engineering excellence. Strong communication throughout a project is key to success and SMS constantly strive to work effectively with customers to ensure expectations are met.

**SMS design and manufacture:**
- Hydraulic Power Units (HPUs)
- Installation and Workover Control Systems (IWOCSs)
- Chemical Injection Units (CIUs)
- Wellhead Control Panels (WHCPs)
- Testing and Flushing HPUs (TFHPUs)
- Topside Umbilical Termination Units (TUTUs)
- Pressurised Control Cabins (PCCs)
- Electrical Control Panels
Services

SMS work with leading international Operators and EPCs to efficiently and safely deliver all sizes of Offshore and Onshore projects and maintenance requirements. As specialists in Hydraulic and Electrical services and with a dedicated team of project managers, planners and technicians, SMS are committed to adding value, reducing downtime and increasing safety within customer operations.

SMS technicians and engineers are competency assured, trained to internationally recognised standards and work in accordance with all legislative industry requirements and guidelines.

Hydraulic and Electrical Services include:

- Total vendor maintenance contracts
- Installation and commissioning
- Site surveys
- Maintenance and inspection
- System upgrades
- Repair and refurbishments
- Hose management contracts
- Site construction projects
- Decommissioning
- 24 hour call off ad-hoc services
Sales and Aftermarket

SMS offer a range of Aftermarket support services to the Oil and Gas industry from full system lifecycle management to component supply.

SMS maintain an extensive stock of components, fittings and hoses that can be collected from a dedicated Trade Counter within the SMS facility or delivered internationally.

**Aftermarket Service and Supply includes:**

- Spares supply management
- Seamless and welded pipe and tube according to EN, ASTM and API standards, in a variety of steel grades (e.g. A106, A333, X52) and sizes
- Flexible hose assemblies manufactured on-site to customer specification
- Hydraulic and pneumatic gauges, valves and fittings
- Hydraulic bladder and piston accumulators
- Recalibration services including pressure relief valves and gauges
- Electrical components
