Technical excellence: delivered

# Aftermarket Services

Innovative engineering solutions for the global energy industry

# Aftermarket Services

## Innovative Engineering Solutions

With extensive experience across metering, process, hydraulic, mechanical, electrical and control systems, we are your one-stop-shop services provider. And as an independent family business, we will always deliver the best-for-application and best-for-business solution for your needs.

### Genuine Parts and Spares

- Just-in-time spares management or a single source for reactive parts
- Global supply chain delivering the right quality at the best value
- Helping you plan and reduce your OPEX through effective parts and spares supply

### Training

- Benefit from the Alderley experience: Specialist training for Metering, Produced Water Treatment and Modular Wellsite Skids
- Enhancing system awareness and operator safety before and during operation
- Delivered online or face-to-face; on-site, in the classroom, or both with Virtual Reality

### Field Services

- Dedicated Field Services team with flexible arrangements
- Supporting both preventative and rapid-response maintenance requirements
- Including: long-term service agreements; full vendor maintenance contracts; 24/7 support; management of calibration and revalidation; and site audits

### Asset Integrity and Inspection

- Close, visual and detailed inspection services utilising our digital tool, Inspection Manager™
- Health and criticality assessments to proactively manage your risks from obsolescence
- Full healthcare service packages to remove the complexity from your day-to-day operations
- All remedial actions can be completed by our experts for a prompt resolution

### Condition Based Monitoring

- Condition Based Monitoring utilising Dynamic Uncertainty and remote diagnostics
- 24/7 performance monitoring
- Providing real-time insights and alerting you to potential faults
- Delivering assured system performance, reduced costs and complete peace of mind

### Modifications and Upgrades

- Brownfield metering, produced water treatment, hydraulic control and process system upgrades
- System re-rates and modifications to best suit the latest process conditions
- Digital and cyber security upgrades, including system modifications to retro-fit the latest technologies, such as IoT and remote monitoring solutions
